

Exhibit A

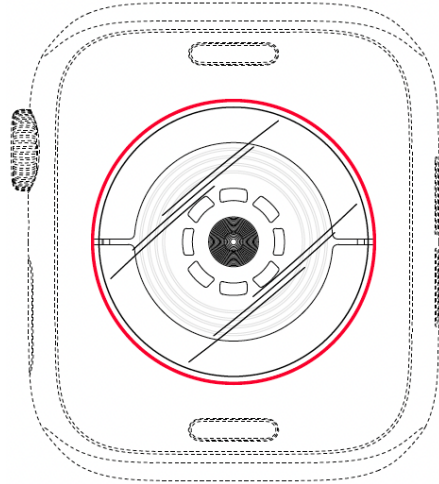

Joint Claim Construction Chart**I. Asserted Apple Design Patents**

The following chart identifies the claims at issue from U.S. Patent Nos. D883,279 (the “D’279 Patent”), D947,842 (the “D’842 Patent”), D962,936 (the “D’936 Patent”), and D735,131 (the “D’131 Patent”) (collectively, the “Asserted Apple Design Patents”), as well as each party’s proposed constructions and citations to intrinsic evidence in support of such constructions.¹

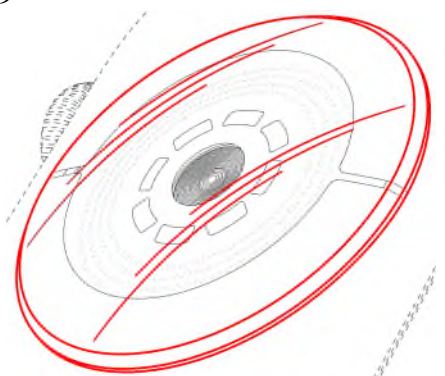

Asserted Apple Design Patents			
No.	Patent(s)	Apple’s Proposed Constructions & Intrinsic Evidence	Masimo’s Proposed Constructions & Intrinsic Evidence
A-1	D’279	<p><u>The claim of the D’279 Patent</u>: The ornamental design for an electronic device, as shown in Figures 1-9 of the D’279 Patent.</p> <p><u>Intrinsic Evidence</u>: D’279 Patent, including its claim, description, and Figures 1-9.</p>	See A-2 through A-12.

¹ Each party reserves the right to rely upon the portions of the intrinsic record cited by the other party, and to rely upon additional intrinsic evidence in the claim constructions briefs to respond to or rebut evidence and arguments made by the other party. Moreover, the parties’ citations to the specification or file history of certain patents are exemplary for like citations within the specifications and file histories of the asserted patents. Additionally, the parties rely generally on the specifications and file histories of the asserted patents, including but not limited to the specific citations identified herein. While each row in this Joint Claim Construction Chart corresponds to a disputed claim, term, or phrase, the parties may group together certain disputes in their claim construction briefs.

Asserted Apple Design Patents			
No.	Patent(s)	Apple's Proposed Constructions & Intrinsic Evidence	Masimo's Proposed Constructions & Intrinsic Evidence
A-4	D'279  See, e.g., D'279 Patent at FIG. 2.	See No. A-1	<p>A circular protrusion coextensive with and protruding from the outermost circle. The protrusion has a cylindrical portion, a chamfered edge, and a convex dome. The height² of the protrusion is approximately 12% of the diameter of the protrusion.</p> <p><u>Intrinsic Evidence:</u> D'279 Patent at Description, Claims, FIGS. 2, 4-8; <i>Masimo Corp. v. Apple Inc.</i>, IPR2023-00774, Paper No. 8 (PTAB July 12, 2023) (Apple's POPR for D'279 Patent).</p>

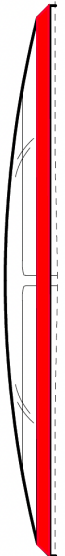

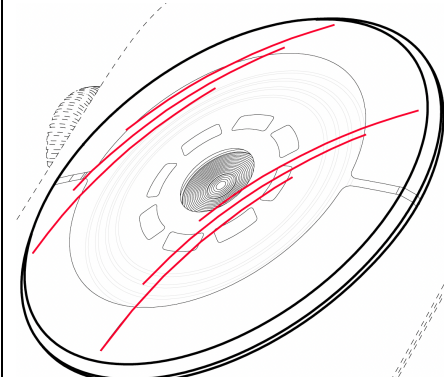

² This relationship can also be phrased as: the diameter of the protrusion is approximately 8.5 times the height of the protrusion.

Joint Claim Construction Chart

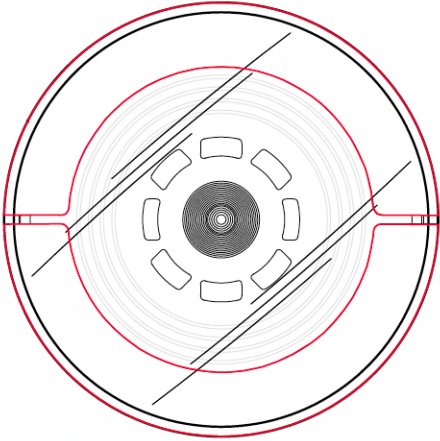

Asserted Apple Design Patents			
No.	Patent(s)	Apple's Proposed Constructions & Intrinsic Evidence	Masimo's Proposed Constructions & Intrinsic Evidence
A-5	D'279  <i>See, e.g., D'279 Patent at FIG. 5.</i>	<i>See No. A-1</i>	<p>The height³ of the cylindrical portion is approximately 16% of the height of the protrusion and approximately 2.0% of the diameter of the protrusion.</p> <p><u>Intrinsic Evidence:</u> D'279 Patent at Description, Claims, FIGS. 2, 4-8; <i>Masimo Corp. v. Apple Inc.</i>, IPR2023-00774, Paper No. 8 (PTAB July 12, 2023) (Apple's POPR for D'279 Patent).</p>

³ This relationship can also be phrased as: the height of the protrusion is approximately 6.3 times the height of the cylindrical portion and the diameter of the protrusion is approximately 50 times the height of the cylindrical portion.

Joint Claim Construction Chart

Asserted Apple Design Patents			
No.	Patent(s)	Apple's Proposed Constructions & Intrinsic Evidence	Masimo's Proposed Constructions & Intrinsic Evidence
A-8	D'279  <i>See, e.g., D'279 Patent at FIG. 4.</i>	<i>See No. A-1</i>	<p>An outer broken-circular feature formed by two arches providing the appearance of a unified circle rather than two separate opposed shapes. The outer edge of each arch coincides with the outermost circle. The top surface of each arch appears coextensive with the cylindrical portion, the chamfered edge, and the convex dome. Each arch has a flat end. Each flat end has a rounded transition to the inner edge of each arch and a sharp transition to the outer edge of each arch (where the end is perpendicular to the outermost circle). The flat ends are separated by a relatively small gap⁴ that is approximately 2.0% of the diameter of the outermost circle. The width⁵ of each arch (the distance between the inner and outer edges of each arch) is approximately 30% of the radius of the outermost circle.</p> <p><u>Intrinsic Evidence:</u> D'279 Patent at Description, Claims, FIGS. 2, 4-8; <i>Masimo Corp. v. Apple Inc.</i>, IPR2023-00774, Paper No. 8 (PTAB July 12, 2023) (Apple's POPR for D'279 Patent).</p>

⁴ This relationship can also be phrased as: the diameter of the outermost circle is approximately 50 times larger than the gap between the ends of the arches.

⁵ This relationship can also be phrased as: the radius of the outermost circle is approximately 3.4 times greater than the width of each arch.

Joint Claim Construction Chart

A-9	<p data-bbox="205 199 384 228">D'279, D'842</p>  <p data-bbox="205 675 625 704"><i>See, e.g., D'279 Patent at FIG. 4.</i></p>	<p data-bbox="812 199 1045 228"><i>See No. A-1, A-13</i></p>	<p data-bbox="1411 199 1988 704">Eight four-sided shapes arranged symmetrically in a circle on a surface below the convex portion of the arches. Two of the four-sided shapes are centered on an imaginary line formed by the gaps between the arches. Each of the eight four-sided shapes has two longer sides and two shorter sides. The shorter sides are flat and substantially parallel to each other, and form eight trapezoidal gaps between the shapes that narrow toward the center of the outermost circle. The gaps between the four-sided shapes are wider than the gaps between the arches.</p> <p data-bbox="1411 743 1988 1289">The longer dimension⁶ of each four-sided shape is approximately 19% of the radius of the outermost circle. The shorter dimension⁷ of each four-sided shape is approximately 9.0% of the radius of the outermost circle. The distance between the center of the outermost circle and the inner edge of each four-sided shape⁸ is approximately 28% of the radius of the outermost circle. The distance between the outer edge of each four-sided shape and the outermost circle⁹ is approximately 64% of the radius of the outermost circle. Each shape has an area¹⁰ of approximately 0.5% of the area of the outermost circle.</p>

Joint Claim Construction Chart

Asserted Apple Design Patents			
No.	Patent(s)	Apple's Proposed Constructions & Intrinsic Evidence	Masimo's Proposed Constructions & Intrinsic Evidence
			<u>Intrinsic Evidence:</u> D'279, D'842 Patents at Description, Claims, FIGS. 2, 4-8; <i>Masimo Corp. v. Apple Inc.</i> , IPR2023-00774, Paper No. 8 (PTAB July 12, 2023) (Apple's POPR for D'279 Patent); <i>Masimo Corp. v. Apple Inc.</i> , IPR2023-00702, Paper No. 8 (PTAB June 29, 2023) (Apple's POPR for D'842 Patent).

⁶ This relationship can also be phrased as: the radius the outermost circle is approximately 5.3 times greater than the longer dimension of each four-sided shape.

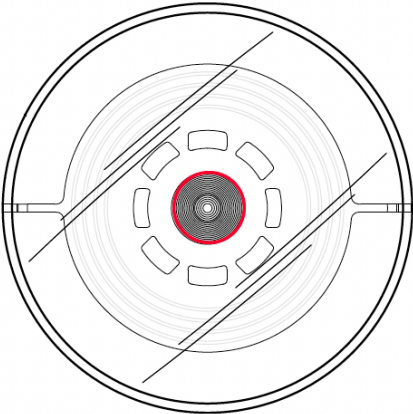

⁷ This relationship can also be phrased as: the radius the outermost circle is approximately 11 times greater than the shorter dimension of each four-sided shape.

⁸ This relationship can also be phrased as: the radius of the outermost circle is approximately 3.5 times greater than the distance between the center of the outermost circle and the inner edge of each four-sided shape.

⁹ This relationship can also be phrased as: the radius of the outermost circle is approximately 1.6 times the distance between the outer edge of each four-sided shape and the outermost circle.

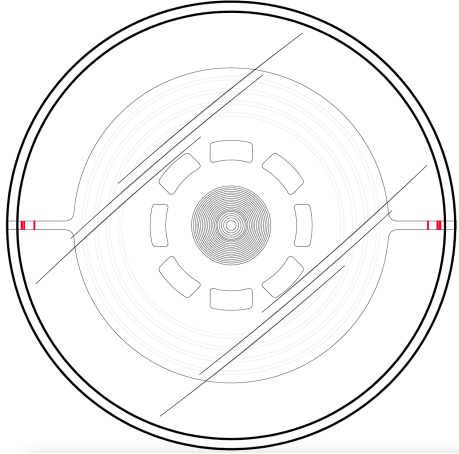

¹⁰ This relationship can also be phrased as: the area of the outermost circle is approximately 200 times greater than the area of each four-sided shape.

Joint Claim Construction Chart

III. Agreed Upon Constructions

The following chart identifies the terms/phrases of Asserted Apple Design Patents and the Asserted Apple Utility Patents for which the parties have agreed upon a construction, as well as the parties' agreed construction for each such term/phrase.

Patent(s)	Term(s)	Agreed Upon Constructions
D'279, D'842, D'936	N/A	The broken lines in the figures show portions of the electronic device and environment that form no part of the claimed design.
D'279	N/A	The oblique line shading shows a transparent, translucent and highly polished or reflective surface.
D'131	N/A	The broken lines in the figures show portions of the charger and environment that form no part of the claimed design. The shade lines in the figures show contour and not surface ornamentation.
'257	lead	plain and ordinary meaning
'257	pad	plain and ordinary meaning
'257	conductivity	plain and ordinary meaning
'783, '491	water-tight seal; waterproof seal	plain and ordinary meaning
'352	power savings state	plain and ordinary meaning
'352	home screen user interface	plain and ordinary meaning
